Attorney's Docket No. 5770.21

**PATENT** 

VC3

## IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re: Bastiaan Driehuys et al.

Examiner: Michael G. Hartley

Serial No.: 09/804,369

Group Art Unit: 1616

Filed: March 12, 2001

For: DIAGNOSTIC PROCEDURES USING DIRECT INJECTION OF GASEOUS HYPERPOLARIZED 129XE AND ASSOCIATED SYSTEMS AND PRODUCTS

November 7, 2002

Commissioner for Patents Washington, DC 20231

## **AMENDMENT**

Sir:

In the claims:

Please cancel Claim 2 and Claims 24-88 without prejudice thereto.

Please replace the below amended claims for the pending claims of like number pursuant to 37 CFR 1.121.

A2

1. (Amended) A method of screening for the presence of a pulmonary embolism, comprising the steps of:

positioning a subject having a pulmonary region and a blood circulation path including veins and arteries in an NMR system, the subject's pulmonary region having pulmonary veins and pulmonary arteries and associated vasculature defining a pulmonary portion of the circulation path;

injecting a first quantity of polarized gaseous phase <sup>129</sup>Xe directly into at least one vein of the subject, wherein the first quantity of polarized gaseous phase <sup>129</sup>Xe is less than about 100 cubic centimeters;

obtaining NMR signal data associated with the injected polarized <sup>129</sup>Xe in the pulmonary region of the subject, the signal data including information corresponding to the polarized gas introduced in said injecting step;

generating an MRI image having spatial visual representation of the NMR signal data of the injected polarized <sup>129</sup>Xe; and
